Education

FAST University

Aug 2019 – Jun 2023

Bachelor of Computer Science

Experience

Multi-Channel AI Booking & Lead Automation Platform

Jun 2026 – Present

Evolv AI

Lahore, Pakistan

Retell AI, ElevenLabs, n8n, GoHighLevel, Python/FastAPI, MCP, Telnyx, Supabase, Google Calendar

- Designed, built, and scaled a production-grade AI automation platform unifying voice (Retell AI, ElevenLabs), WhatsApp, and SMS into a single pipeline that qualifies leads, books appointments, and syncs CRM data in **real time** — driving a **40x lead-volume scale-up** across multiple live client deployments while cutting automation waste by up to **90%**.
- Led development of an autonomous WhatsApp booking agent (GHL Agent Studio, custom Python/FastAPI MCP backend) that holds natural conversations to qualify leads, geocode addresses, and book appointments straight to Google Calendar; resolved a critical backend crash and re-engineered the input pipeline, boosting **structured data extraction accuracy** from free-form conversation.
- Re-architected a failure-prone n8n automation engine using parallelized processing and intelligent rate-capping, cutting wasted executions by **70–90%** and enabling a **40x scale-up**, from a 600-lead pilot to a **10,000+ lead campaign**, without a single platform outage.
- Built a fault-tolerant, globally compliant SMS delivery layer (Telnyx) covering **52+ countries** with automatic number normalization and real-time failure alerting, and hardened CRM logic (GoHighLevel) across **11+ pipeline stages** with full Supabase audit logging, eliminating silent lead loss entirely.

Data Scientist

Jan 2024 – Jan 2026

Machine Learning 1 Pvt Ltd

Lahore, Pakistan

- Joined the **Service-Based Department** as an **Intern** (Jan – Mar 2024), delivering high-quality ML solutions, coordinating with cross-functional teams, and providing post-delivery technical support.
- Promoted to **Associate Data Scientist** (Apr – Jun 2024) within the same department, taking on increased ownership of client deliverables and technical problem-solving.
- Promoted to full-time **Data Scientist** (Jul 2024 – Jan 2026), leading KYC automation, AI agents, and RAG-based services.
- Developed and maintained ML and computer vision-based document verification systems for ID cards, passports, and driving licenses, achieving **>95% extraction accuracy**.
- Fine-tuned and deployed large language models (**Phi-3, Mistral-7B, LLaMA-3**) for KYC/KYB document analysis, improving extraction accuracy by **25–40%**.
- Built an automated compliance pipeline that reduced manual review time by **60–70%** and doubled onboarding throughput.
- Optimized model inference using quantization and batching, reducing latency by **35–50%** and compute costs by **40%**.
- Collaborated with cross-functional teams to deploy models into production and ensure **scalable, reliable performance**.

Machine Learning Engineer – Intern

Aug 2023 – Oct 2023

GlowingSoft Technologies

Lahore, Pakistan

- Developed Python scripts, optimized SQL queries, performed data preprocessing, and built ML models for real-world datasets.
- Created visual dashboards, automated scraping workflows, and contributed to **8+ data-driven projects**.

Freelance AI Engineer

Jan 2023 – Jun 2023

Upwork & Fiverr

Remote

- Delivered ML, automation, and data processing solutions to global clients with a strong focus on **accuracy, timelines, and client satisfaction**.
- Developed and deployed **multiple end-to-end ML solutions** spanning **classification, NLP, and intelligent data pipelines**, achieving **95%+ accuracy** and streamlining workflows to save **60% of manual effort**.

Projects

Intelligent Text-to-SQL Chatbot | Python, LangChain, MySQL, SQLAlchemy

[GitHub](#)

- Engineered an AI-powered chatbot that transforms natural language queries into precise SQL commands using **Google Gemini 2.0 Flash** and LangChain.
- Integrated MySQL via SQLAlchemy and PyMySQL, enabling **secure, real-time database interaction**.
- Designed modular LangChain pipelines with advanced prompt engineering to ensure **accurate and context-aware SQL generation**.

Automated Human Resources System | *Python, OpenAI, PostgreSQL*

- Developed an AI-driven workflow for resume extraction using OpenAI, enhancing **candidate data extraction precision**.
- Built a robust PostgreSQL database for secure candidate data storage and designed APIs for automated candidate screening.

Pharmaceutical Bot | *Python, LangChain, OpenAI, FAISS*

- Created a RAG system using LangChain and OpenAI for generating **SOPs tailored to the pharmaceutical industry**.
- Implemented BGE small embedding with FAISS DB for effective chunk retrieval, achieving **faster response times** with streaming enhancement.

Personal AI Assistant Automation Platform | *Python, n8n, Streamlit, OpenAI, Google APIs* [GitHub](#)

- Built an AI-powered personal assistant that can send emails, schedule meetings, manage tasks, create documents, and perform web searches through conversational commands using LLM agents and n8n workflows.
- Integrated Google Workspace APIs and autonomous workflow pipelines to execute multi-step productivity tasks with minimal manual intervention.

WhatsApp Visa & Travel Automation System | *n8n, Twilio WhatsApp API, Groq LLM, LlamaIndex* [GitHub](#)

- Developed an AI-driven WhatsApp automation system that collects travel documents, extracts passport details, updates applicants, and tracks visa application workflows in real time.
- Engineered scalable event-driven automation pipelines to streamline high-volume visa and travel operations with reduced manual coordination.

AI Voice Agent Platform | *Vapi AI, OpenAI, Python, APIs, Automation Workflows* [GitHub](#)

- Built a real-time AI voice agent capable of answering calls, handling customer conversations, booking appointments, responding to queries, and triggering automated workflows using Vapi AI and LLMs.
- Integrated conversational AI with external APIs and automation systems for dynamic voice-based task execution and real-time responses.

Technical Skills

- Programming Languages:** Python, SQL
- Machine Learning:** Supervised learning, classification, regression, clustering, model evaluation
- Data Preprocessing:** Data cleaning, feature engineering, normalization, imputation, outlier detection
- Libraries & Frameworks:** Scikit-learn, Pandas, NumPy, XGBoost, LightGBM, FastAPI
- NLP:** Text classification, sentiment analysis, NLTK, SpaCy
- Generative AI & LLMs:** LangChain, OpenAI API, RAG, Hugging Face, Phi-3, Mistral, LLaMA, MCP (Model Context Protocol)
- Computer Vision:** Document verification, OCR, image preprocessing
- Data Visualization:** Power BI, Matplotlib, Seaborn
- Voice AI & Telephony:** Retell AI, ElevenLabs, Vapi AI, Telnyx, Twilio
- Automation, CRM & Workflow Tools:** n8n, GoHighLevel, Intercom
- APIs & Integrations:** Google Calendar API, Google Workspace APIs
- Version Control:** Git, GitHub, GitLab
- Databases:** MySQL, MongoDB, PostgreSQL, Supabase

Achievements

- Performance Certificate** – Awarded by Machine Learning 1 Pvt Ltd on Aug 8, 2024, in recognition of exceptional contributions to the **KYC/KYB product** within the **R&D Department**

Certifications

- Introduction to Data Science – Coursera**
- Practical Implementation of Data Science – Simplilearn**
- Building Applications with Vector Databases – Deeplearning.ai**
- IBMI Project Management Certificate – IBMI**
- Statistical Decision Making in Data Science – Coursera**
